*Supplement to ISSN 0112-9333*

 **Introduction.**

This supplement (which can be considered as a stand-alone publication) was prompted by the Solar Influences Data-analysis Centre / Sunspot Index and Long-term Solar Observations (SIDC/SILSO) decision to remove their scaling factor of 0.6, and introduce other minor factors into the evaluation of the International Relative Sunspot Number ( $R_i$ ).

The evaluation of the new GDSO Version 2 Wolf Number ( $R_{GD2}$ ), is done in the same manner as that to obtain the old  $R_{GD}$ , that being the observed monthly, annual or rotational means multiplied by a monthly, annual or rotational mean  $k$  co-efficients.

When spotless observations occur, true quotients are either 0 or  $\infty$ , therefore they are discarded for the purposes of obtaining co-efficients (labelled  $k_2$ ).

Other values are explained on the following page.

Important points:

- The telescope used for observing the Sun is a 76 mm refractor with projection screen.
- Months and years end at 24h 00m on the last day of the Co-ordinated Universal Time (UTC) month or year.
- Data have been back-dated to March 1973, with some data of the early years not as reliable as later years.
- The GDSO was manned part-time up to May 1989, and nearly full-time since that date.
- As 1982 involved a 6-week-long trip to the United Kingdom and continental Europe, the values (observed and corrected) for June are interpolated. There was also a break in November 2015. Values for this break are yet to be interpolated. They will appear in the GDSO Annual Report for 2016.

 **Contents.**

Introduction	S2
Contents	S2
Analytical Formulæ	S3
Smoothing Formulæ	S4
Monthly GDSO Wolf Numbers & Corrected Values 1973-2015	S5
Rotational GDSO Wolf Numbers & Corrected Values (Rotations 1599-2171)	S20
Smoothed Monthly Version 2 Wolf Number Values 1973-2015	S36
GRAPH:	
Corrected and Smoothed GDSO Version 2 Wolf Number Values 1973-2015	S40

The following are formulæ used in the analysis of sunspot data etc.

$\sigma$  (sample standard deviation) is computed as:

$$\sqrt{\frac{\sum k^2 - \frac{(\sum k)^2}{n_k}}{n_k - 1}}$$

The annual  $\sigma$  result is computed from a total pool of k values.

$\sigma^{mw}$  (annual standard deviation based on the SIDC's formula)

is computed as:

$$\frac{\sum (\sigma \times n_k)}{\sum n_k}$$

$E\sigma$  (estimate of standard deviation) is computed as:

$$\frac{\sqrt{\sum (\sigma^2 \times n_k)}}{\sum n_k}$$

---

**Smoothing Formulæ.**

---

The following are the two formulæ used in the smoothing of GDSO sunspot data. All are based on monthly means ( $\bar{x}$ ).

Data suffixed ( $S^W$ ) are computed as:

$$\frac{\sum_{-5}^{+5} \bar{x} + \frac{\bar{x}_{+6} + \bar{x}_{-6}}{2}}{12}$$

Data suffixed ( $S^{B13}$ ) are computed as:

$$\frac{0.75(\bar{x}_{+6} + \bar{x}_{-6}) + 2(\bar{x}_{+5} + \bar{x}_{-5}) + 3(\bar{x}_{+4} + \bar{x}_{-4}) + 4(\bar{x}_{+3} + \bar{x}_{-3}) + 5(\bar{x}_{+2} + \bar{x}_{-2}) + 6(\bar{x}_{+1} + \bar{x}_{-1}) + 6.5\bar{x}_0}{48}$$

---

CORRECTED VERSION 2 WOLF NUMBERS for 1973 - 2015.

As the GDSO is in suburban Auckland, it can suffer terrible atmospheric conditions, hence the 'observed' Wolf Numbers have to be upgraded to give reflections of international results. International Wolf Number results are computed by the Solar Influences Data-Analysis Centre (SIDC), at the Observatoire Royal de Belgique, Bruxelles, Belgium.

Below are the 'observed' Wolf Numbers (WN) along with the monthly 'Version 2' co-efficients (k2) and the corrected values ( $R_{GD2}$ ) for 1973 - 2015. The SIDC's final values ( $S_n$ ) are also stated.

$I/GDSO_2$  = SIDC's mean (of days observed by the GDSO) divided by the GDSO's monthly mean.

$I/GDSO_{k2}$  = SIDC's mean (of days with GDSO k2 values) divided by the GDSO's observed mean for the *same* days.

n = number of GDSO observations.

$n_k$  = number of k values.

$\sigma_2$  = sample standard deviation of k2 values.

$\sigma^{mw2}$  = annual  $\sigma$  computed on the SIDC's monthly-weighted formula.

$E\sigma_2$  = annual estimate of standard deviation.

See note concerning  $R_{GD2}$ ,  
pages iv & xvi, GDSO  
Annual Report for 2015.

CORRECTED **VERSION 2 WOLF NUMBERS** for Rotations 1599 - 2171.

As a k value is attributed to each spotted observation, the k value for any specific rotation is the mean of all the co-efficient values (k2) for the rotation concerned.

The corrected values are labelled  $R_{GD2}$ .

$$R_{GD2} = WN \times k2.$$

$\sigma_2$  = sample standard deviation of k2 values.

$I/GDSO_2$  = International mean (of days observed by the GDSO) divided by the GDSO's rotation mean.

$I/GDSO_{k2}$  = International mean (of days observed by the GDSO) divided by the GDSO's observed mean for the *same* days.

n = number of GDSO observations.

$n_k$  = number of k values.

ROTA-TION	START DATE, UT	WN	k2	$R_{GD2}$	$\sigma_2$	$R_{GDm2}$	$I/GDSO_2$	$I/GDSO_{k2}$	n	$n_k$
